

Geography

Teaching and Learning Syllabus

Grades 3 to 6

Mauritius Institute of Education
under the aegis of
Ministry of Education and Human Resources, Tertiary Education and Scientific Research

Teaching and Learning Syllabus Geography

The Teaching and Learning Syllabus refers to the content of what is to be taught, and to the knowledge, skills, competencies, attitudes and values that are to be developed. It articulates concisely the specific learning outcomes for each grade as per the NCF 2015 and features achievable learning outcomes that represent a Teaching and Learning road map.

- **The focus of the TLS**

- **Clear statements of what learners must achieve**

The TLS spells out the specific learning outcomes that learners are expected to achieve progressively in terms of knowledge, understanding, skills, 21st Century Competencies, attitudes and values during each year of schooling, from Grades 1 to 6.

- **Currency and relevancy in content**

The TLS ensures currency and relevance of content and acquisition of developmentally-appropriate concepts and skills.

- **Detailed content/topics to be covered and skills to be developed**

The TLS details the content and topics to be covered as well as the skills to be developed for each grade while addressing the problem of curriculum overload and stress.

- **Progression and sequence of topics across grades**

The TLS outlines the scope and sequence of the specific learning outcomes for each grade. It indicates the grade in which knowledge, concepts, skills and processes related to the learning outcomes are introduced, based on a spiral curriculum. The learning outcomes are progressively sequenced across grades.

- **Achievement criteria and levels**

The TLS defines assessment criteria that are scaffolded and represent clear measurable outcomes. The levels reflect the competencies in terms of knowledge, skills, values and attitudes expected to have been acquired by learners. The development of achievement levels are meant to assist in the differentiation of teaching, learning and assessment so that the curriculum is accessible to all learners.

Rationale	5
Expected Learning Outcomes for Geography	5
The Development of 21st Century Competencies and Geography	6
Scope and Sequence of Content Areas for Geography	7
Content Areas, Specific Learning Outcomes and Achievement Levels of Geography for Grade 3, 4, 5 and 6	8

RATIONALE

The Geography teaching and learning syllabus places emphasis on the following:

- i. Development of inquiry skills and processes
- ii. Integration of 21st Century Skills
- iii. Adaptation to the generation of digital learners
- iv. Integration of cross-curricular themes such as ESD, Disaster Risk Education and Citizenship.
- v. Consideration for Lucerne Declaration on Geographical Education for Sustainable Education (International Geographical Union)
- vi. Encouragement of geographical thinking that upholds the Sustainable Development Goals

The Geography Teaching and Learning Syllabus encourages a progressive understanding and analysis of and reflection on the characteristics of the places that make up our islands, the region and the world. The syllabus is also a presentation of the competencies, specific learning outcomes and achievement levels for all content areas at each grade of primary schooling.

Geography makes use of inquiry and geographical skills to bring an understanding to the concepts of place, space, scale, environment, change, interconnection and sustainability.

EXPECTED LEARNING OUTCOMES FOR GEOGRAPHY

By the end of Grade 6, learners should be able to:

- Develop an interest in and enthusiasm for the study of people and environment within the local community, country and the world
- Understand the basic geographical concepts of place and space, causes and effects
- Develop a range of inquiry skills
- Understand how people and the environment interact over time and space
- Understand and appreciate the complex interdependence of living and non-living things
- Develop caring attitudes and responsible behaviour towards the environment.

THE DEVELOPMENT OF 21ST CENTURY COMPETENCIES AND GEOGRAPHY

A knowledge of Geography and the development of geographical skills contribute in achieving the 21st Century competencies as outlined in the NCF. Geography's major contributions for 21st century skills development while also addressing sustainable development goals can be viewed through three lenses:

- 1) The continued quest for knowledge about Earth and its future. In this journey, learners develop critical and creative thinking and their learning experiences will be enhanced as they will access, use and interpret information from different sources including technology.
- 2) Concerns for the positive relationship between people and the environment through sustainable interactions. Learners will engage in problem solving by discussing on issues related to sustainable development.
- 3) Equipping learners with the necessary values and skills that will enable them to become responsible and effective in their roles as active global citizens.

Figure 1: 21st Century Competencies for All Learners

SCOPE AND SEQUENCE OF CONTENT AREAS FOR GEOGRAPHY

- Geographical Knowledge and Understanding

The Geography syllabus comprises of 4 major units which are related to the natural environment of our islands, to our weather and climate, to the occurrence of natural hazards in the Indian Ocean region which has to be considered as a first step in Disaster Risk Education; and Human Geography. Emphasis will be on changing land use in Mauritius and Rodrigues, including agricultural land use, the agro-industry and land use for Tourism purposes. Situated learning will be reinforced and further contextualised so that our children can connect the learning of geography to their own context.

- Inquiry and Skills

Geography, which is a component of the SSEE curriculum, encourages the development of inquiry skills and processes. Learners will be engaged across the different grades in the following:

Observing and questioning: Identifying an issue or problem and developing questions to investigate the issue or find an answer to the problem.

Collecting, recording, evaluating and representing: Collecting information from primary and/or secondary sources, recording the information and representing it in a variety of forms.

Interpreting and analysing: Making sense of the information.

Communicating: Communicating the results of inquiry using various methods (written, oral, audio, graphical, visual and mapping)

Reflecting and responding: Reflecting on the findings of the inquiry, i.e., on what has been learnt.

- Geographical Skills

These comprise the techniques that geographers use in their investigations, both in fieldwork and in the classroom. Acquiring skills such as map skills will be integrated throughout the units. Learners are expected to draw, sketch, trace, produce graphs and make use of instruments in their observations and learning.

- Geographical Literacy and Language Development

Children's learning in geography will be enriched with greater attention given to the use of language skills. The development of geographical vocabulary is essential for a sound understanding of the subject and pupils will be encouraged to convey their understanding in a proper written form.

- Geographical Values and Attitudes

Geography helps learners to develop and clarify their attitudes and values towards people and places and is key to environmental awareness and concern. Learners become prepared for life as responsible and respectful global citizens. The philosophy behind the syllabus is meant to empower them to take actions which could make the world more sustainable.

CONTENT AREAS, SPECIFIC LEARNING OUTCOMES AND ACHIEVEMENT LEVELS OF GEOGRAPHY FOR GRADES 3, 4, 5 AND 6

Achievement criteria are assessment objectives that are scaffolded and represent clear measurable outcomes. The levels reflect the competencies in terms of knowledge, skills, values and attitudes expected of pupils. The criteria move progressively from Level 1 (basic competency) to Level 3.

GRADE 3 – OUR NATURAL ENVIRONMENT						
TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
OUR NATURAL ENVIRONMENT	Observe, describe and classify basic natural and man-made features in the immediate environment (locality, Mauritius, Rodrigues)	Level 1	Recognise and list some natural features.	Name some natural features	Recognise and/or read; then name natural features.	Recognise and/or read, name, and write correctly the name of natural features
			Recall and name some mountains, hills, rivers and beaches in Mauritius and Rodrigues	Name one well known mountain, hill, river and beach in her/his island	Name some mountains, hills, rivers and beaches in her/his island	Name some mountains, hills, rivers and beaches in Mauritius and Rodrigues

	(Mountain, Hill, River: Source, Waterfall, Mouth / Seaside and Coastal Features (Beach, Lagoon, Reef, Cliff, Sand, Coral)	Level 2	Recognise and compare some natural features through diagrams, pictures, line drawings and maps	Identify the natural features	Identify and state the differences between natural features	Identify and describe in a short sentence the natural feature and/or the differences between natural features.
			Draw and label some natural features	Draw the natural features	Draw and label the natural features	Draw and label, with creativity and properly the natural features
			Realise that the natural environment is precious and must be kept clean.	State that the environment is precious and must be kept clean	State and briefly explain why the environment is precious and must be kept clean	Suggest ways to keep the environment clean
		Level 3	Observe and describe your immediate environment	Observe and name natural features in your immediate environment	Observe, name and write a list of natural features in your immediate environment	Observe, name and describe in a short sentence the natural features in your immediate environment
			Develop personal safety skills (seaside, rivers, waterfalls, forests)	Recognise that a child must be careful when going out in nature	Recognise that a child must be careful when going out in nature and must listen to parents / elders	Recognise that a child must be careful when going out in nature, can state things we should do and not do and must listen to their parents.

GRADE 4 – OUR NATURAL ENVIRONMENT						
TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
OUR NATURAL ENVIRONMENT	Observe, describe and classify basic natural and man-made features in the immediate environment (locality, Mauritius, Rodrigues) (Mountains, mountain ranges, hills, mounts, plateau, plains, valleys, ridge.) i.e. / slope and height /	Level 1	Locate and name the main features of the natural environment in Mauritius and Rodrigues	Name the main features of the of the natural environment in Mauritius and Rodrigues	Name and locate on maps the main features of the of the natural environment in Mauritius and Rodrigues	Name and locate on maps and describe the main features of the of the natural environment in Mauritius and Rodrigues
		Level 2	Recognise and describe the basic characteristics of some natural features.	identify some characteristics of natural features e.g. lower & higher / flat & steep /	Describe the basic characteristics of some features of the of the natural environment in Mauritius and Rodrigues	With the use of drawings and/or maps, describe the basic characteristics of some features of the of the natural environment in Mauritius and Rodrigues
		Level 3	Draw and label maps showing the main features of the natural environment in Mauritius and Rodrigues	Draw and label map/s showing the main features of the natural environment in Mauritius and Rodrigues	Draw and label map/s with some key items (e.g. title, direction) showing the main features of the natural environment in Mauritius and Rodrigues	Draw and label map/s accurately with all key items (title, scale, direction, key) showing the main features of the natural environment in Mauritius and Rodrigues

GRADE 5 – OUR NATURAL ENVIRONMENT

TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
OUR NATURAL ENVIRONMENT	1. Recall that the environment is made up of natural features and man-made features	Level 1	Name features which make up the natural environment (rivers, mountains, sea, valleys etc...) and man-made environment (buildings, gardens, reservoirs, roads, etc...)	Recall features of the environment	Recall features of the environment and differentiate between man-made and natural features	Recall features of the environment, differentiate between man-made and natural features and explain the differences.
			Name some environmental problems in Mauritius and Rodrigues	Name the environmental problems in Mauritius and Rodrigues (beach erosion, soil erosion and pollution)	Name and locate places in Mauritius and Rodrigues with environmental problems (beach erosion, soil erosion and pollution)	Name, locate places and describe environmental problems in Mauritius and Rodrigues (beach erosion, soil erosion and pollution)
		Level 2	Draw and label features of the environment	Draw and label diagrams showing features of the environment	Draw and label diagrams showing features of the environment and differentiate between natural and man-made features	Draw and label diagrams properly and creatively to show features of the environment and differentiate between natural and man-made feature

			Recognise that natural sites around the world are of great value to humanity	Name and locate natural sites on a map (examples provided) Realise that they form part of our natural heritage	Name and locate natural sites on a map (examples provided) Realise that they form part of our natural heritage Inquire with the use of ICT (Google Earth)	Name and locate natural sites on a map (examples provided) Realise that they form part of our natural heritage Inquire with the use of ICT (Google Earth) Discuss and give reasons why they are important and need to be protected
			Identify and describe features of the environment from pictures and diagrams	Identify/locate and name the natural features shown in the diagrams and pictures.	Identify/locate, name, interpret the natural features shown in diagrams and pictures.	Identify/locate, name, interpret and describe/ explain the natural features shown in diagrams and pictures.
			Recognise that natural sites around the world are of great value to humanity	Name and locate natural sites on a map (examples provided) Realise that they form part of our natural heritage	Name and locate natural sites on a map (examples provided) Realise that they form part of our natural heritage, inquire with the use of ICT (Google Earth)	Name and locate natural sites on a map (examples provided) Realise that they form part of our natural heritage, inquire with the use of ICT (Google Earth) Discuss and give reasons why they are important and need to be protected
			Identify and describe environmental problems from pictures and diagrams	Identify/locate and name the environmental problems shown in the diagrams and pictures.	Identify/locate, name, interpret the environmental problems shown in diagrams and pictures.	Identify/locate, name, interpret and describe/ explain the environmental problems shown in diagrams and pictures.

		Level 3	Explain how people's activities may damage the environment	Identify some activities which damage the environment	Identify and briefly describe the activities which damage the environment	Identify, describe and explain the activities which damage the environment
			Appreciate that we need to take actions to make our environment sustainable		Give a simple definition of the term sustainability	Give a simple definition of the term sustainability and discuss about it.
			List and appreciate measures taken to protect and embellish the environment (protect, restore and conserve)	Name some measures taken to protect and embellish the environment (protect, restore and conserve)	Name and describe measures taken to protect and embellish the environment (protect, restore and conserve)	Name, describe and realise the importance of measures taken to protect and embellish the environment (protect, restore and conserve)

TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
	2. Explore, describe and explain the main natural features of our islands	Level 1	State that Mauritius and Rodrigues have been formed by volcanoes	State that our islands are of volcanic origin	State that long ago our islands have been formed by volcanoes	State that long ago our islands have been formed by volcanoes which are now dormant.
			Name the main products of a volcano (lava, tuffs, ash, gas)	Name some of main products of a volcano (lava, tuffs, ash, gas)	Name the main products of a volcano (lava, tuffs, ash, gas)	Name and briefly describe the main products of a volcano (lava, tuffs, ash, gas)
			Locate and name the main volcanic cones and crater lakes in Mauritius (dormant) Trou aux Cerfs, Trou Kanaka, Basin Blanc, Grand Bassin, Bar le Duc, Mont Piton...	Name some of the main volcanic cones and crater lakes in Mauritius (dormant)	Name and locate on a map some of the main volcanic cones and crater lakes in Mauritius (dormant)	Name and locate on a map the main volcanic cones and crater lakes in Mauritius (dormant)

		Locate and name active volcanoes in the south-west Indian Ocean (active)	Name one of the active volcanoes (Karthala or La Fournaise)	Name the two active volcanoes (Karthala or La Fournaise)	Name and locate on a map the two active volcanoes (Karthala or La Fournaise)
		Locate and name relief features and main rivers on maps of Mauritius and Rodrigues		Name and locate on map/s some relief features and main rivers of Mauritius and Rodrigues	Name and locate on map/s the relief features and main rivers of Mauritius and Rodrigues
	Level 2	Draw and label the main parts of a volcano in eruption (magma chamber, pipe, crater, volcanic cone)	Draw and label a diagram showing some parts of a volcano in eruption	Draw and label a diagram showing the parts of a volcano in eruption	Draw and label diagrams properly and creatively to show the parts of a volcano in eruption
		Differentiate between an active and a dormant volcano	State that some volcanoes are active and others dormant.	State and describe the difference between active and dormant volcanoes.	Describe with relevant examples the difference between active and dormant volcanoes.
		Locate and describe the main relief features of Mauritius (mountains and mountain ranges, central plateau and plains) and Rodrigues (central ridge, sloping lands and river valleys, plain)	Name and locate some of the MAIN relief features of Mauritius (mountains and mountain ranges, central plateau and plains) and Rodrigues (central ridge, sloping lands and river valleys, plain)	Name, locate and attempted to describe the MAIN relief features of Mauritius (mountains and mountain ranges, central plateau and plains) and Rodrigues (central ridge, sloping lands and river valleys, plain)	Name, locate and accurately described the MAIN relief features of Mauritius (mountains and mountain ranges, central plateau and plains) and Rodrigues (central ridge, sloping lands and river valleys, plain)
		Describe what are alluvium, limestone and tuffs.	Provide a simple definition of alluvium, limestone and tuffs.	Provide a simple definition and locate where alluvium, limestone and tuffs are found (Rodrigues)	Provide a simple definition, locate where alluvium, limestone and tuffs are found (Rodrigues) and discuss about their characteristics and/or uses.

			Identify and describe examples of relief features (mountain range, mountain, hill, plateau, plain, rivers, river valley, and gorges) from diagrams and pictures.	Identify/locate and name the relief features (mountain range, mountain, hill, plateau, plain, rivers, river valley, and gorges) from diagrams and pictures	Identify/locate, name and attempt to describe the relief features (mountain range, mountain, hill, plateau, plain, rivers, river valley, and gorges) from diagrams and pictures	Identify/locate, name, interpret and properly describe the relief features (mountain range, mountain, hill, plateau, plain, rivers, river valley, and gorges) from diagrams and pictures
			Draw and label diagrams showing relief features (mountain range, mountain, plateau, plain, waterfall, gorge, river valley, hill, volcanic cone, crater, central ridge, sloping lands) and coastal landforms (cliff, bay, beach, coral reef) and lagoon	Draw diagram/s showing relief features (mountain range, mountain, plateau, plain, waterfall, gorge, river valley, hill, volcanic cone, crater, central ridge, sloping lands) and coastal landforms (cliff, bay, beach, coral reef) and lagoon	Draw and properly label diagram/s showing relief features (mountain range, mountain, plateau, plain, waterfall, gorge, river valley, hill, volcanic cone, crater, central ridge, sloping lands) and coastal landforms (cliff, bay, beach, coral reef) and lagoon	Draw and label diagram/s appropriately and creatively to show the relief features (mountain range, mountain, plateau, plain, waterfall, gorge, river valley, hill, volcanic cone, crater, central ridge, sloping lands) and coastal landforms (cliff, bay, beach, coral reef) and lagoon
		Level 3	Describe a volcano in eruption	List some of the stages during a volcanic eruption (magma from the chamber, eruption from a vent, magma rising through the pipe, lava flowing out of the crater, a cone is built up)	Attempt to describe some the stages during a volcanic eruption (magma from the chamber, eruption from a vent, magma rising through the pipe, lava flowing out of the crater, a cone is built up)	Describe correctly the stages during a volcanic eruption (magma from the chamber, eruption from a vent, magma rising through the pipe, lava flowing out of the crater, a cone is built up)

			Give simple explanations about the formation of Mauritius and Rodrigues	State that Mauritius and Rodrigues were formed by volcanoes long ago and provide some elements of description	Describe some of the main facts in the formation of Mauritius and Rodrigues	Describe and briefly explain the main facts and/or sequence in the formation of Mauritius and Rodrigues
			Draw, read and interpret simple relief maps of Mauritius and Rodrigues	Read and/or Draw and label map/s showing relief of Mauritius and Rodrigues	Read and interpret; and/or Draw and label map/s relief of Mauritius and Rodrigues with some key items (title, scale, direction, key)	Read and interpret and/or Draw and label accurately map/s with all key items (title, scale, direction, key)

GRADE 3 – WEATHER						
TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
WEATHER	Observe and record a variety of weather conditions	Level 1	Describe the weather of the day (sunny, cloudy, rainy and windy)	Name types of weather	Identify and name the type of weather of the day	Identify, name and describe the type of weather of the day
		Level 2	Recognise weather conditions through diagrams, pictures and line drawings.	Identify weather conditions through diagrams, pictures and line drawings.	Identify and state the differences among the weather conditions through diagrams, pictures and line drawings.	Identify and describe in a short sentence the weather conditions through diagrams, pictures and line drawings.
			Draw and label different weather conditions	Draw the different weather conditions	Draw and label the different weather conditions	Draw and label, with creativity and properly the different weather conditions
			Read and interpret a weather chart	Name the weather conditions from a weather chart	Name and interpret the weather conditions from a weather chart	Name and interpret the weather conditions from a weather chart and describe the uses of a weather chart

		Level 3	Recognise and draw symbols to represent the weather conditions	Recognise some weather symbols	Recognise and draw some of the weather symbols	Recognise and draw the weather symbols appropriately
			Observe, record and draw a weather chart for one week.	Observe and identify the weather condition	Observe, identify and record the weather condition	Observe, identify record and draw the symbol on a weather chart accurately

GRADE 4 – WEATHER						
TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
WEATHER	Identify and name instruments used to measure temperature, rainfall, wind direction and speed	Level 1	Identify and describe the two seasons of Mauritius and Rodrigues.	Name the two seasons (summer and winter)	Name and describe at least one of the two seasons properly	Name and describe the two seasons properly
			Draw and label diagram showing the two seasons.	Draw diagram/s showing winter and/or summer	Draw and label appropriately diagram/s showing winter and/or summer	Draw and label appropriately diagram/s to show the difference between winter and summer
			Name the instruments used to record weather conditions. (Thermometer, rain gauge, wind vane and anemometer)	Name some of the instruments used to record weather conditions.	Name the instruments used to record weather conditions and attempt to explain the specific function of some instruments	Name the instruments used to record weather conditions and explain the specific function of each instruments
		Level 2	Identify the summer and winter months of Mauritius and Rodrigues.	Name one summer and winter month of Mauritius and Rodrigues.	Name summer and winter months of Mauritius and Rodrigues.	State the summer and winter periods of Mauritius and Rodrigues. (from ... to ...)

			Differentiate between the two seasons of Mauritius and Rodrigues.	Recall the summer and winter periods of Mauritius and Rodrigues. (from ... to ...)	Recall the summer and winter periods of Mauritius and Rodrigues. (from ... to ...) and state some of the differences	Recall the summer and winter periods of Mauritius and Rodrigues. (from ... to ...) and describe the differences
			Recognise the type of season through diagrams, pictures and drawings.	Identify the types of season through diagrams, pictures and drawings.	Identify and state the differences between the types of season through diagrams, pictures and drawings.	Identify and discuss the differences between the types of season through diagrams, pictures and drawings.
		Level 3	Make their own rain gauge and wind vane to observe and record rainfall (in mm) and wind direction.	Make their own rain gauge and wind vane	Make functioning rain gauge and wind vane to observe and record rainfall (in mm) and wind direction.	Make functioning rain gauge and wind vane to observe and record rainfall (in mm) and wind direction on a weather chart during a week / month
			Follow the weather forecast issued by the meteorological station (Mauritius and Rodrigues)	List the media through which the meteorological station issues the weather forecast	Recall for a week the weather forecast issued by the meteorological station.	Recall for a week the weather forecast issued by the meteorological station and discuss its consistency
			Realise the importance of weather forecast. (for agriculture, for air and sea transport, for schools etc...)	State one importance use of weather forecast for people and their activities	State the importance of weather forecast for people and their activities	Discuss the importance of weather forecast for people and their activities
			Realise that weather conditions affect our lives and activities. (rainfall, drought, cyclone)	State one weather condition which affect our lives and activities. (rainfall, drought, cyclone)	State the weather conditions which affect our lives and activities. (rainfall, drought, cyclone)	Discuss how weather conditions affect our lives and activities. (rainfall, drought, cyclone)

GRADE 5 – WEATHER						
TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
WEATHER	Describe and explain the climatic conditions in Mauritius and Rodrigues (temperature and rainfall)	Level 1	Name the instrument used to measure and record temperature	Recall that a thermometer is used to measure and record temperature	State that temperature is measured in degree Celsius	Describe how and when temperature is recorded
			Read the temperature from a thermometer (diagram/picture)		Read the temperature from a diagram/picture of a thermometer	Read and interpret the temperature (cold, cool, warm, hot) from a diagram/picture of a thermometer
			Draw and label diagrams showing convectional and relief rains	Draw diagram/s showing convectional and relief rains	Draw and label appropriately diagram/s showing convectional and relief rains	Draw and label appropriately diagram/s to show the difference between convectional and relief rains
		Level 2	Describe what is temperature of the air		Describe partially temperature (how hot / how cold the air is)	Describe properly temperature (how hot or how cold the air is)
			Use a thermometer to read and record temperature in degree Celsius	Recognise that the instrument is a thermometer	Recognise the instrument, read and record temperature.	Recognise the instrument, read and record temperature; and infer that the liquid rises and falls with change in temperature
			Describe the temperature in Mauritius and Rodrigues	State the temperature prevailing in Mauritius and Rodrigues.	State and describe the temperature prevailing in Mauritius and Rodrigues.	Describe and explain the temperature prevailing in Mauritius and Rodrigues.

			Describe how temperature changes with seasons in Mauritius and Rodrigues.	State the temperature in summer and winter in Mauritius and Rodrigues.	State and describe the change in temperature between summer and winter in Mauritius and Rodrigues.	Describe and explain the change in temperature between summer and winter in Mauritius and Rodrigues.
			Interpret diagrams and pictures to deduce that temperature decreases with height, e.g. Kilimanjaro	Describe elements / features of diagrams and pictures.	Describe and conclude that temperature decreases with height. (e.g. Kilimanjaro) with the use of diagrams and pictures	Demonstrate and explain that temperature decreases with height. (e.g. Kilimanjaro) with the use of diagrams and pictures
			Explain how rain is formed within the water cycle process	Explain how rain is formed within the water cycle process	Identify and describe in correct sequence the water cycle	Identify and describe in correct sequence the water cycle and explain how rain is formed
			Infer that rainfall distribution is related to relief (windward and leeward sides), seasons and the South East Trade Winds (prevailing winds)	Name and locate on map/s the windward and leeward sides, and the South East Trade Winds (prevailing winds)	Name and locate on map/s the windward and leeward sides, and the South East Trade Winds (prevailing winds) and describe the rainfall distribution	Describe and explain rainfall distribution in relation to relief (windward and leeward sides), seasons and the South East Trade Winds (prevailing winds)
			Identify and describe convectional and relief rains through diagrams and pictures	Identify/locate and name the type of rainfall through diagrams and pictures	Identify/locate, name and attempt to describe the type of rainfall through diagrams and pictures	Identify/locate, name, properly describe and differentiate between the two types of rainfall through diagrams and pictures

		Level 3	Describe the temperature over the Earth's surface by stating that temperature changes from the Equator (hot) to the Poles. (cold)	Describe (only) that the temperature is either hot at the Equator or cold at the poles.	Describe that the temperature changes over the Earth's surface from hot to cold.	Describe clearly that the temperature changes over the Earth's surface by stating that temperature changes from the Equator (hot) to the Poles. (cold)
			Draw a globe showing how temperature changes from Equator to the Poles.	Draw a globe showing temperature changes	Draw and label a globe showing temperature change from equator to the Poles	Draw and label appropriately a globe showing temperature changes from equator to the Poles with the correct colour theme.
			Explain how temperature changes also with height (from place to place) in Mauritius and Rodrigues.	Describe that temperature changes from lowlands to highlands and between windward and leeward sides	Describe that temperature changes from lowlands to highlands and between windward and leeward sides with the use of relevant examples	Describe and explain the temperature change from lowlands to highlands and between windward and leeward sides with the use of relevant examples
			Infer that temperature decreases with height (altitude)	Describe that temperature decreases with altitude	Describe that temperature decreases with altitude with the use of relevant examples	Infer and discuss the decrease in temperature with altitude with the use of relevant examples
			Describe and explain the formation of relief and convectional rains	Describe the formation of one of the types of rainfall.	Describe and explain the formation of one of the types of rainfall	Describe and explain the formation of relief and convectional rains

			Differentiate between relief rain and convectional rain by answering the geographic questions: when, why, how and where.	Describe the differences between relief rain and convectional rain by answering to some of the geographic questions: when, why, how and where.	Describe the differences between relief rain and convectional rain by answering to the geographic questions: when, why, how and where.	With the use of well labelled diagrams and/ or a concept map, explain the differences between relief rain and convectional rain by answering to the geographic questions: when, why, how and where
			Explain that the climate is changing because of human activities	Identify some human activities that pollute the atmosphere.	Identify some human activities that pollute the atmosphere and describe what is climate change.	Identify some human activities that pollute the atmosphere and describe what is climate change and its consequences.
			Extract and interpret information on climate from tables, maps, grid maps and climate graphs.	Read and describe information on climate from some of the secondary sources	Read and describe information from tables, maps, grid maps and climate graphs (interpreting properly a climate graph)	Read, interpret, describe and discuss information from tables, maps, grid maps and climate graphs (interpreting properly a climate graph)

GRADE 6 – LAND USE						
TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
LAND USE	Recognize the types of land use and investigate the recent changes in Mauritius and Rodrigues Land use and changing land use / case study : land use for tourism purposes (the tourist sector)	Level 1	Recognise and name the different types of land use and define the term 'wasteland'	Name the common types of land use in Mauritius and Rodrigues	Name and recognise from various sources the common types of land use in Mauritius and Rodrigues, describe what a wasteland is.	Name, recognise and describe from various sources the common types of land use in Mauritius and Rodrigues, discuss on wastelands.
			Explain the meaning of the term 'tourist'	Show a partial understanding of what a tourist; e.g. 'someone who travel'	Provide properly a definition for the term 'tourist'	Discuss the meaning of the term 'tourist' and provide a proper definition

			Give examples of jobs in the tourist industry	Name some jobs in the tourist industry.	Name and describe a variety of jobs in the tourist industry	Describe and discuss the importance of people working in the tourist industry
			Locate and name the countries from which tourists come to Mauritius	Name some of the main countries of origin	Name and locate on a map some of the main countries of origin	Name and locate on a map some of the main countries of origin and discuss why tourists come from these countries.
		Level 2	Define the term land use and give reasons to account for different types of land use	Show a partial understanding of what land use is and state some of the reasons for the different types of land use (purpose/ function/ activities/ development)	Provide a definition for the term 'land use' and describe some of the reasons for the different types of land use (purpose/ function/ activities/ development)	Discuss the meaning of the term 'land use', provide a proper definition and describe the reasons for the different types of land use (purpose/ function/ activities/ development)
			Explore one change in land use : The Tourist sector and explain the changes in land use for the development of the tourist sector	Inquire and recognise from various sources that one important land use in Mauritius is for tourism purposes.	Inquire and recognise from various sources that land use changed mostly from agricultural to tourism purposes	Inquire, recognise from various sources and discuss why land use changed mostly from agricultural to tourism purposes
			Explain the geographical location of tourist hotels	Inquire and recognise from various sources that most of our hotels are along the coast	Inquire and recognise from various sources that most of our hotels are along the coast near the sandy beaches; providing relevant examples.	Inquire, recognise and explain from various sources (providing relevant examples) the geographical location of most of our hotels.

			Give reasons why tourists come to Mauritius and Rodrigues	Give one reason why tourists come to our islands	Give reasons why tourists come to our islands	Gives reasons and discuss why and how tourists come to our islands
			State the benefits of the tourist industry	State one of the benefits of the tourist industry	Identify the main benefits of the tourist industry	Identify and discuss the benefits of the tourists industry
			Draw and label a map showing types of land use.	Draw and label a map showing the types of land use in Mauritius and	Draw and label a map showing the types of land use in Mauritius with some key items (title, scale, direction, key)	Draw and label appropriately a map showing the types of land use in Mauritius with all the key items (title, scale, direction, key)
		Level 3	Identify and explain the recent changes land use	Inquire and recognise from various sources the recent changes land use.	Use various sources to inquire, recognise and describe the recent changes land use.	Use various sources to inquire, recognise and explain the recent changes land use, including the concept of time. (or using a timeline)
			2. Read and interpret data, maps and pictures and diagrams on land use and changes in land use	Read and describe information correctly on land use and changes in land use from some of the secondary sources	Read and describe information correctly from maps and pictures and diagrams on land use and changes in land use	Read, interpret, describe and discuss information correctly from maps and pictures and diagrams on land use and changes in land use

TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
LAND USE	2. Investigate land use in agriculture and the methods of farming in Mauritius and Rodrigues	Level 1	Name some crops grown and some animals reared in Mauritius and Rodrigues	Name some crops grown and some animals reared in your immediate environment.	Name some crops grown and some animals reared in Mauritius and Rodrigues	Name and discuss some crops grown and some animals reared in Mauritius and Rodrigues
			Locate some places where the land is used for agriculture in Mauritius and Rodrigues	Locate some places where the land is used for agriculture in Mauritius and Rodrigues	Inquire from various sources (maps) some places where the land is used for agriculture in Mauritius and Rodrigues	Inquire from various sources (maps) some places where the land is used for agriculture in Mauritius and Rodrigues and discuss the location factors
			Locate and name sugar cane growing areas and sugar mills	State where sugar cane is grown in Mauritius and name the sugar mills	Inquire from various sources (maps) where sugar cane is grown in Mauritius and name the sugar mills	Inquire from various sources (maps) where sugar cane is grown in Mauritius and name the sugar mills and discuss the location factors
		Level 2	Define the term 'agriculture' and explain its importance		Give a simple definition of the term 'agriculture'	Give a simple definition of the term 'agriculture' and discuss the importance of agriculture
			List and describe the types of farming in Mauritius and Rodrigues	Name the 4 types of farming in Mauritius and Rodrigues	Name and describe the 4 types of farming in Mauritius and Rodrigues	Name, describe and discuss the 4 types of farming in Mauritius and Rodrigues

		Level 3	Explain why terrace farming is practised in Rodrigues	Describe terrace farming	Describe and locate where terrace farming is practised in Rodrigues	Discuss why terrace farming is practised in Rodrigues
			Interpret data, maps, and pictures and diagrams related to agricultural land use	Read and describe information correctly on agricultural land use from some of the secondary sources	Read, interpret and describe information correctly from maps and pictures and diagrams on agricultural land use	Read, interpret, describe and discuss information correctly from maps and pictures and diagrams on agricultural land use
			Realise that in Mauritius land use changed mostly from agricultural to other types of land use.	Recognise that in Mauritius land use changed mostly from agricultural to other types of land use.	Inquire and recognise from various sources that in Mauritius land use changed mostly from agricultural to other types of land use.	Inquire, recognise from various sources and discuss why land use changed mostly from agricultural to other types of land use.

GRADE 6 – NATURAL HAZARDS						
TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
NATURAL HAZARDS	Recognise different types of natural hazards and discuss their impact	Level 1	Define the term 'natural hazard'		Give a simple definition of the term "natural hazards"	Give a simple definition of the term 'natural hazards' and discuss about them
	(cyclones, torrential rain, flash floods, drought, volcanoes, earthquakes and tsunami.)		Name the most common 'natural hazards' (cyclone, torrential rain, flash flood, drought, volcano, earthquake and tsunami)	Name the most common 'natural hazards' affecting Mauritius and Rodrigues (cyclone, torrential rain, flash flood, drought)	Name and describe the most common 'natural hazards' affecting countries in the Indian Ocean region.	Name, describe and discuss the most common 'natural hazards' affecting countries in the Indian Ocean region

		Level 2	Describe the causes of these natural hazards	State the conditions for the occurrence of the natural hazards	Using relevant examples and/or diagrams state the conditions for the occurrence of the natural hazards	Using relevant examples and/or diagrams discuss the occurrence of the natural hazards in the Indian Ocean
		Level 3	State the effects of these hazards on people, human activities and the natural environment	State the effects of natural hazards on people, human activities and the natural environment in Mauritius and Rodrigues	State the effects of natural hazards on people, human activities and the natural environment in countries of the Indian Ocean.	Inquire on the effects of natural hazards on people, human activities and the natural environment
			List some precautions that should be taken for better preparedness and reduce risks.	State some basic precautions that should be taken for better preparedness and reduce risks.	State and explain why some precautions that should be taken for better preparedness and reduce risks.	Inquire and explain and why some precautions should be taken for better preparedness and reduce risks
			Realise that we need to show empathy and solidarity during such events	Realise that many people need support and help during such events	Realise that we need to show empathy and solidarity during such events	Suggest actions to be taken to demonstrate solidarity during such events

GRADE 3 – MAP SKILLS						
TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
MAP SKILLS	Demonstrate basic graphical skills	Level 1	Trace and draw simple maps and symbols	Trace and draw simple maps	Trace and draw simple maps and symbols	Trace and draw simple maps and symbols creatively and accurately
		Level 2	Interpret diagrams, pictures, line drawings and maps	Observe and recognise features in diagrams, pictures, line drawings and maps	Observe, recognise and interpret features in diagrams, pictures, line drawings and maps	Observe, recognise and interpret and discuss features in diagrams, pictures, line drawings and maps

		Level 3	Compare and describe diagrams and pictures.	Observe and compare features in diagrams and pictures.	Observe, compare and differentiate among the features in diagrams and pictures	Observe, compare, differentiate among the features in diagrams and pictures and discuss
--	--	----------------	--	--	--	---

GRADE 4 – MAP SKILLS

TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
MAP SKILLS	Locate places and features on a map using the grid system, direction and scale.	Level 1	Identify the four cardinal points and four intermediate points	Identify the four cardinal points	Identify the four cardinal points and four intermediate points	Draw and label a diagram to show the four cardinal points and four intermediate points
		Level 2	Locate features on a grid line map	Identify the features on the grid line map	Identify in which grid is a feature on the grid line map	Draw a feature in the correct grid on the grid line map
			Read a map with the use of a key	Identify the symbols in the key	Locate the specific symbols on the map	
		Level 3	Measure straight line distances between two points by using a scale	Measure straight line distances between two points close to each other by using a scale	Measure straight line distances between two points by using a scale	Measure straight line distances between two points by using a scale with accuracy

GRADE 5 – MAP SKILLS

TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
MAP SKILLS	Read, interpret and extract information from a range of maps, graphs and ICT applications	Level 1	Locate places on a map using simple grid and direction – 4 cardinal points (N, S, E, W) and 4 intermediate points NE, NW, SE, SW)	Recall the 4 cardinal points (N, S, E, W) and 4 intermediate points NE, NW, SE, SW)	Locate places on a map using simple grid and direction – 4 cardinal points (N, S, E, W) and 4 intermediate points NE, NW, SE, SW)	

			Measure distances on a map using the scale	Measure straight line distances between two points by using a scale (reinforcement)	Measure straight line distances between two points by using a scale with accuracy (reinforcement)	
			Read and interpret a map using a key, symbols and scale	Read a map with the use of with some key items (title, scale, direction, key) - reinforcement	Read and interpret a map with the use of key items (title, scale, direction, key) - reinforcement	
			Recognise outline maps of the Mascarene islands, Agalega and Madagascar.	Identify the Mascarene islands, Agalega and Madagascar from outline maps	Identify and describe the Mascarene islands, Agalega and Madagascar from outline maps	
			Locate and name the main lines of latitude and longitude	Name the main lines of latitude and longitude (equator, Tropic of Cancer, Tropic of Capricorn, Greenwich Meridian)	Name and locate on a map the main lines of latitude and longitude (Equator, Tropic of Cancer, Tropic of Capricorn, Greenwich Meridian)	Name, locate on a map and describe the main lines of latitude and longitude (Equator, Tropic of cancer, tropic of Capricorn, Greenwich Meridian)
		Level 2	Read and interpret maps with isolines (contour lines, isotherm, isohyet)	Recognise the type of isoline on a map (contour lines, isotherm, isohyet)	Recognise and interpret the purpose of the isoline on a map (contour lines, isotherm, isohyet)	Recognise, interpret and discuss the isoline on a map (contour lines, isotherm, isohyet)
			Recognise the outline map and the oceans and seas bordering Africa	Recognise the outline map of Africa	Recognise the outline map of Africa and name the two oceans bordering it (Atlantic and Indian oceans)	Recognise the outline map of Africa and name the two oceans and seas bordering it (Atlantic and Indian oceans, Red Sea, Mozambique Channel and Mediterranean Sea)

			Locate and name the main global features on a globe/world map (continents, oceans, mountain ranges, rivers)	Name the main global features (continents, oceans, mountain ranges, rivers)	Locate and name the main global features on a globe/world map (continents, oceans, mountain ranges, rivers)	Locate, name and describe the main global features on a globe/world map (continents, oceans, mountain ranges, rivers)
			Draw the outline map and label the oceans and seas bordering Africa of the Indian Ocean	Draw and label a map showing the oceans and seas bordering Africa of the Indian Ocean	Draw and label a map showing the oceans and seas bordering Africa of the Indian Ocean with some key items (title, scale, direction, key)	Draw and label appropriately a map showing the types of land use in Mauritius with all the key items (title, scale, direction, key)
			Draw and label a world map showing the main physical features (continents, oceans, mountain ranges, rivers)	Draw and label a map showing the main physical features (continents, oceans, mountain ranges, rivers)	Draw and label a map showing the main physical features (continents, oceans, mountain ranges, rivers) with some key items (title, scale, direction, key)	Draw and label appropriately a map showing the main physical features (continents, oceans, mountain ranges, rivers) with all the key items (title, scale, direction, key)
			Locate countries, capital cities and ports in the Indian Ocean and wider region using latitude and longitude		Locate countries, capital cities and ports in the Indian Ocean and wider region using the given latitude and longitude	Give the latitude and longitude of any given capital cities and ports in the Indian Ocean and wider region
		Level 3	Extract and interpret information tables and graphs (Line graph, bar graph, pie chart)	Identify the type and purpose of the information tables and graphs	Extract and interpret information tables and graphs (line graph, bar graph, pie chart)	Extract, interpret and explain information tables and graphs (line graph, bar graph, pie chart)

			Extract information from larger scale maps of Mauritius and Rodrigues	Identify the type and purpose of larger scale maps of Mauritius and Rodrigues (local, district, regional, coastal / agriculture, locality, tourism ...)	Extract and interpret information from larger scale maps of Mauritius and Rodrigues (local, district, regional, coastal / agriculture, locality, tourism ...)	Extract, interpret and explain information from larger scale maps of Mauritius and Rodrigues (local, district, regional, coastal / agriculture, locality, tourism...)
			Draw and label a map showing the main islands, countries and seas of the Indian Ocean / rim	Draw and label a map showing the main islands, countries and seas of the Indian Ocean / rim	Draw and label a map showing the main islands, countries and seas of the Indian Ocean / rim with some key items (title, scale, direction, key)	Draw and label appropriately a map showing the main islands, countries and seas of the Indian Ocean / rim with all the key items (title, scale, direction, key)

GRADE 6 – MAP SKILLS						
TOPIC	LEARNING OUTCOME		SPECIFIC LEARNING OUTCOMES	Achievement Level 1	Achievement Level 2	Achievement Level 3
MAP SKILLS	Read, interpret and extract information from a range of maps, graphs and ICT applications	Level 1	Locate places on a map using simple grid and direction – 4 cardinal points (N, S, E, W) and 4 intermediate points NE, NW, SE, SW)	Recall the 4 cardinal points (N, S, E, W) and 4 intermediate points NE, NW, SE, SW)	Locate places on a map using simple grid and direction – 4 cardinal points (N, S, E, W) and 4 intermediate points NE, NW, SE, SW)	
			Measure distances on a map using the scale	Measure straight line distances between two points by using a scale (reinforcement)	Measure straight line distances between two points by using a scale with accuracy (reinforcement)	
			Read and interpret a map using a key, symbols and scale	Read a map with the use of with some key items (title, scale, direction, key) - reinforcement	Read and interpret a map with the use of key items (title, scale, direction, key) - reinforcement	

		Level 2	Read and interpret maps with isolines (contour lines, isotherm, isohyet)	Recognise the type of isoline on a map (contour lines, isotherm, isohyet)	Recognise and interpret the purpose of the isoline on a map (contour lines, isotherm, isohyet)	Recognise, interpret and discuss the isoline on a map (contour lines, isotherm, isohyet)
		Level 3	Extract and interpret information tables and graphs (line graph, bar graph, pie chart)	Identify the type and purpose of the information tables and graphs	Extract and interpret information tables and graphs (line graph, bar graph, pie chart)	Extract, interpret and explain information tables and graphs (line graph, bar graph, pie chart)
			Extract information from larger scale maps of Mauritius, Rodrigues, Indian ocean and the World	Identify the type and purpose of larger scale maps	Extract and interpret information from larger scale maps	Extract, interpret and explain information from larger scale maps
			Draw and label maps showing areas facing natural hazards in the Indian Ocean	Draw and label a map showing areas facing natural hazards in the Indian Ocean	Draw and label a map showing areas facing natural hazards in the Indian Ocean with some key items (title, scale, direction, key)	Draw and label appropriately a map showing areas facing natural hazards in the Indian Ocean with all the key items (title, scale, direction, key)
