

PSAC 2025

Grade 6

Modular Assessment History & Geography

Subject code : P142/2

Examiners' Report

Key messages

To improve their performances, candidates should:

- read questions carefully - pay attention to the instructions and the key words in the questions.
- engage with real-world resources - follow cyclone/ heavy rainfall/ torrential rain bulletins and hazardous events such as volcanic eruptions, earthquakes and Tsunamis to improve understanding of natural hazards and awareness of the precautions to be taken before, during and after the occurrence of any natural hazard.
- develop analytical skills- learn to interpret geographical and historical information from tables, maps, diagrams, pictures and short texts.
- understand historical contribution– be able to discuss the work of slaves and the living conditions of slaves in Mauritius and their contribution to the economic development of Mauritius during the colonial period.
- be familiar with sustainability principles - recognise the importance of sustainable farming practices and its impact on the environment.
- improve answer structure– learn to provide full detailed responses, not just short phrases or one-word answer where required.
- check spelling and grammar – revise responses before submission. Though spelling and grammar is not penalized in the History and Geography assessment, answers with a lot of grammatical mistakes are often difficult to understand and interpret by the Examiners.
- Answer in English - where required, use subject-specific vocabulary accurately.

General Comments

The Grade 6 Modular History & Geography question paper 2025 comprised 7 questions:

- Multiple-choice question (MCQ)1 with 8 items assessing knowledge and understanding in History and Geography;
- four questions assessing skills, knowledge and understanding in Geography (Questions 2, 3, 5 and 7);
- and two questions assessing skills, knowledge and understanding in History (Questions 4 and 6).

The overall performance was satisfactory with a percentage of 74.60 % pass rate at first sitting. There was an increase of 2.87 % after re-assessment resulting in 77.47 %. The overall percentage pass in 2025 was 77.47 %. The performance of girls was better than that of the boys.

A significant number of candidates showed a fair acquisition of the basic skills and knowledge in the subject. However, the quality of performance in terms of standards of achievement still need to be improved.

Candidates performed well in multiple-choice items and items requiring very short answers. Some candidates circled two options in MCQs. The answer was not accepted even if one of the options selected was correct. Educators should train their students on the techniques to answer MCQs.

Questions that required higher order skills presented certain challenges to candidates. They did not give elaborate responses, often did not use appropriate qualifiers or quantifiers or correct comparison where necessary. Many candidates provided only a short phrase and very often without any verb or simply provided a one-word answer for structured type questions. It was also noticed that many candidates did not attempt any of the structured type questions. The low performance of some candidates may be due to language difficulties: lack of proficiency in reading with understanding and writing coherently in simple sentences hindered them from providing an answer to the open-ended questions.

In order to enhance the quality of teaching and learning and hence to improve performance in assessments, pupils should be strongly encouraged to read questions carefully and understand the questions before attempting to answer. They should be trained to identify key words or vocabulary and apply reasoning skills before attempting any open-ended or structured question. They should develop their curiosity, creative skill, communication skill and other 21st century skills to hone their learning and writing capabilities. Learners should be fully involved in class activities, group work and adopt peer learning as positive strategies. Constant revision work too should be carried out.

Field work should be carried out on a regular basis according to topics taught for candidates to benefit from first-hand experience or real-life situations. Experiential learning strategies such as fieldtrip and Inquiry-based learning increase retention rates among learners. Visits to market gardens, tourist hotels, volcanic sites, monuments and museums during educational tours could help for deeper acquisition of knowledge and understanding in both History and Geography topics.

Specific Comments Question 1:

MCQ (8 marks)

This question was fairly well answered. It consisted of eight multiple-choice items assessing factual knowledge in Geography (items 1 and 6) and History (items 2, 3, 4, 5, 7 and 8), carrying a total of 8 marks. However, two items (item 3 and 8) were particularly challenging to candidates.

- Item (1)** Well-performed. The majority of the candidates correctly selected option D (Factories).

- Item (2)** The correct answer for compulsory education in Mauritius was 16 years (Option C). It was successfully attempted by approximately half of the candidates (56.5%). A fifth of candidates chose answer D (17 years) which was incorrect.

- Item (3)** Skilled workers were brought from India (correct answer A). Approximately half of the candidates got the correct answer. Many candidates opted for Madagascar which was incorrect.

- Item (4)** The correct answer for the music composition of the national anthem of Mauritius was Philippe Gentil (option C). Most candidates got the right answer. However, a fair number of candidates did opt for Jean Georges Prosper which was incorrect.

- Item (5)** Generally, well answered. Most candidates chose the right option. The first governor to bring slaves to Mauritius was Van Der Stel (Option C).

- Item (6)** Easy for most candidates. A majority correctly identified 100 mm as part of the definition of torrential rains (100 millimetres of widespread rain occurring in less than 12 hours).

- Item (7)** Challenging for many the candidates. About half of the candidates got the right answer for the location of the Blue Penny Museum at Port Louis (option D).

Item (8) Candidates confused the roles of the different persons given in the options. About 40% of candidates chose the right answer. The first Governor General of Mauritius being Sir John Shaw Rennie (option B). However many candidates opted for Sir Abdool Raman Osman who was the first **Mauritian** Governor General. It is important that candidates read the question properly so as to not make mistakes that can be avoided.

Recommendations for MCQs:

To improve performance in the Multiple Choice Question (MCQ) section, Educators should adopt a more targeted approach to practising core historical and geographical facts.

- **Focus on Core Content:** Practice should center on the foundational facts that frequently appear in examination items, ensuring candidates are well-versed in the "building blocks" of the syllabus.
- **Targeted Revision:** Concentrate on specific dates, locations, and national symbols that are commonly tested. Using past papers to identify these recurring themes helps candidates prioritise their revision.
- **Prioritise Depth Over Rote:** Encourage candidates to explore the "why" and "how" behind a fact rather than just memorising it. By researching the historical stories or geographical reasons associated with a topic, students build a more robust knowledge base.
- **Enhancing Ease of Attempt:** When candidates understand the deeper context, factual questions become much more intuitive to answer. This shift from simple memorisation to conceptual understanding makes the content far more accessible.

Question 2: Land Use (7 marks)

Question 2 comprised three sub-questions based on Unit 1: Land Use.

Part (a): Focused on pollution

Part (b): Focused on the 3R's

Part (c): Focused on household waste

Part question 2(a) - Pollution

This section was based on **Picture 1**, which depicted a farmer using pesticides in the fields.

Picture 1

2(a)(i) Water pollution

(i) Explain how the excessive use of pesticides causes **water** pollution.

.....
..... [2]

Candidates were required to explain how excessive use of pesticides causes water pollution. Nearly half of the candidates did not score in this part. There were some decent answers for 2 marks (around 22%). Explanation provided by many candidates was not in relation to water pollution or not enough attention paid to the term 'excessive'. It was also

found that candidates did not pay enough attention to the keyword 'how' in the question, as such many answers remained incomplete.

Accepted answers included:

- Pesticides when dissolved by rain / irrigation seeps into the ground and contaminates the ground water.
- When it rains the pesticides are washed away and the water goes into rivers causing water pollution.

One mark was allocated to answers deemed incomplete, for example:

- When rain falls, it carries in rivers.

2(a)(ii) Harmful effect of water pollution

(ii) Give **one** harmful effect of water pollution caused by the excessive use of pesticides.

..... [1]

Candidates were required to give one harmful effect of water pollution which is **caused by** excessive use of pesticides. Many candidates got the correct answer. Those who did not score for this part mainly gave harmful effects of pollution in general, which was not specific to being caused by excessive use of pesticides. Harmful effects on both humans and the environment were accepted.

Accepted answers included:

- May cause the death of aquatic animals.
- It can impact on human life if people consume infected aquatic animals.
- Marine/aquatic animals and plants die.
- Marine ecosystem is destroyed.
- Coral reefs are destroyed.

Part question 2(b)

Candidates were required to identify the remaining two components of the 3Rs, with “Reuse” already provided.

(b) People are encouraged to use the 3R's to protect the environment.

'Reuse' is one of the 3R's. Name the other **two** R's.

1.

2.

[2]

The majority of candidates performed well on this item, with approximately 60% of the cohort achieving full marks. The expected responses were “Reduce” and “Recycle.”

Part question 2(c)

2(c)(i) Reusable household waste

Candidates had to name one household waste that can be reused.

(c) Household waste can be reused instead of being thrown away.

(i) Name **one** household waste that can be reused.

..... [1]

Most candidates answered correctly and demonstrated a good understanding of the concept by providing a wide range of appropriate examples.

Accepted answers included:

- Plastic/glass bottles
- kitchen waste
- Food waste
- Empty/ Metal cans
- Plastic bags
- Newspaper/ Paper
- Garden waste
- Towels/Fabrics/Textile products
- Egg shells

2(c)(ii) How the identified household waste can be reused

Candidates were required to describe how the household waste identified in part (c)(i) could be reused.

(ii) Describe how the household waste you mentioned in (c) (i) can be reused.

..... [1]

Since part (c)(ii) was linked to the previous part (c)(i), only approximately one-third of the cohort could score the mark. Nevertheless, candidates who attempted the question generally provided relevant and thoughtful responses, demonstrating a good level of conceptual understanding and maturity of thought.

A few examples of responses noted (depending on the material identified in the previous part) included:

- Using plastic bottles for home decoration
- Using plastic bottles as planters for growing crops
- Converting kitchen waste into compost or natural fertilisers
- Making pencil holders from waste materials
- Reusing items for shopping purposes
- Repurposing materials for cleaning (e.g. as mops)
- Using eggshells in the garden

Recommendation:

Educators are encouraged to incorporate real-life examples when teaching topics related to pollution and the 3Rs. Learners can also be engaged in group-based mini projects on this theme to promote experiential and inquiry-based learning. Such approaches make learning more meaningful, enhance retention, and support the development of critical thinking skills among learners.

Question 3: Land Use for Tourism Purposes (9 marks)

Question 3 aimed to assess candidates' knowledge and understanding of land use for tourism purposes. It consisted of two parts: (a) and (b). **Map 1** illustrated the locations of major tourist hotels in Mauritius, with a few villages also labelled.

Part question 3(a)**3(a)(i) Leisure activities in Grand Baie**

(i) Grand Baie is a busy tourist resort. Name two leisure activities available to tourists in Grand Baie. 1. 2. [2]

Candidates were required to name two leisure activities available for tourists in Grand Baie. Candidate performance on this question was varied: approximately one-third of the cohort scored full marks, another third scored one mark, while the remaining third did not score. Examiners noted that many candidates provided correct responses, and a wide range of answers were accepted as valid.

Accepted answers included:

- Boat cruises/ catamaran/ Speed boating
- Sea sports
- Night clubs
- Restaurants
- Casinos
- Kite surfing/ Surfing
- Diving/ Scuba diving
- Snorkelling
- Parasailing
- Boating/ Kayaking
- Fishing/ Big Game Fishing
- Shopping

Recommendation:

Candidates should be made aware that answers which may appear different but are essentially the same will be credited only once. This will help them avoid repetition and improve accuracy in their responses.

3(a)(ii) Reason for the concentration of tourist hotels in the north

Candidates had to provide one reason to explain why many tourist hotels are found in the north.

(ii) There are many tourist hotels in the north.
Give **one** reason why.

..... [1]

This question was straightforward, with a range of possible answers relating to weather and climate, as well as accessibility. However, approximately two-thirds of the candidates were unable to score the mark.

Accepted answers included:

- Because the climate is warm
- Because of beautiful/ sandy beaches
- Because of calm/ beautiful lagoons
- Most of the sandy beaches are found in the north.

3(a)(iii) Importance of tourism for people living in coastal regions

Candidates were expected to provide one reason explaining the importance of tourism to people living in coastal regions.

(iii) Give **one** reason why tourism is important for the people living in coastal regions.

.....
..... [2]

This part question was well answered by candidates who attempted it, with nearly half securing full marks and only 4% obtaining partial marks. However, many candidates did not attempt the question, indicating a lack of preparation.

Accepted answers included:

- It creates jobs in the sector / People can find jobs in hotels.
- It encourages infrastructural developments such as roads / provision of electricity.
- Small businesses can grow (shops, restaurants)
- Beach hawkers can sell their products to tourists and earn a living.

One mark was awarded to limited answers or one-word answers which were pertinent.

Part question 3(b)

3(b)(i) Ecotourism

Candidates were expected to name one ecotourism site in Mauritius and one in Rodrigues.

(b) It is important to promote ecotourism.

(i) Name **one** ecotourism site in:

1. Mauritius:

2. Rodrigues:

[2]

Only about a third of candidates secured full marks for this part of the question. Examiners noted that many candidates left it blank, particularly when asked about ecotourism sites in Rodrigues.

Accepted answers included:

For Mauritius:

- Black River Gorges/ L'Ile aux Aigrettes/ Le Morne Brabant/ Bras d'Eau National Park/ Valley des Ferney/ Machabée forest / Chamarel/ Vallée des Couleurs/ Ebony Forest Reserve/ Ile aux Cerfs/ Ile aux Bénitiers

For Rodrigues :

- Roche Bon Dieu / Anse Quitor/ Caverne Patate/ Francois Léguat Nature Reserve/ Ile aux Cocos/ Grande Montagne Nature Reserve

Recommendation :

A classroom map of ecotourism and heritage tourism sites should be made accessible to all candidates. Regular quizzes could also be used to reinforce knowledge of the names, locations and importance of major sites in Mauritius and Rodrigues.

3(b)(ii) Benefits of Ecotourism to natural environment

This part question required candidates to explain how ecotourism contributes positively to the natural environment.

(ii) Explain how ecotourism is beneficial to the natural environment.

[2]

Candidates found this part of the question challenging. Only about a fifth of the cohort managed to secure full marks, while the majority (60%) did not score at all. Examiners observed that many candidates tended to define 'ecotourism' rather than explicitly explain how it benefits the natural environment, resulting in incomplete answers that did not earn maximum marks.

Accepted answers included:

- They contribute to the embellishment and preservation of our island.
- It encourages tourists to visit our natural sites without harming the environment.
- It helps to protect our endemic animals and plants.

Recommendation:

Educators can support candidates in reading questions carefully and understanding what is being asked, ensuring that their answers are relevant and improving their chances of scoring. Candidates should also be given more practice with this type of question to develop their writing skills.

Question 4: Slavery (7 marks)

This question assessed candidates' knowledge of slavery in Mauritius, including the daily life of slaves, the abolition of slavery, and the actions of runaway slaves. This question was generally well attempted. Candidates demonstrated good recall of historical facts, with about a third of candidates achieving full marks.

Part 4(a) – Fill in the blanks:

This part required candidates to complete statements using the correct terms related to the main food of slaves, their living conditions, and the year slavery was abolished.

- (a) Fill in the blanks with the correct word from the brackets.
- (i) The main food of slaves was maize and
(dholl, rice, manioc)
- (ii) Slaves lived in small huts in slave compound called
des Noirs. (Camp, Ville, Village)
- (iii) Slavery was abolished in Mauritius and its dependencies in
(1715, 1835, 1968)

[3]

Overall, candidates performed very well in this section. More than 80% of the candidates answered all three questions correctly, showing a solid understanding of our history.

- **Item 1: Food (Manioc)**

This was the best-performed item. 91% of candidates knew that manioc was the main food of slaves.

- **Item 2: Housing (Camp des Noirs)**

87% of candidates correctly identified 'Camp des Noirs' as the place where slaves lived.

- **Item 3: Abolition of Slavery (1835)**

80% of candidates knew that slavery was abolished in 1835. While this is still a very good result, it was the lowest score of the three items. A few students likely confused this date with other important years in history.

Part question 4(b)

4(b)(i) - Runaway slaves' name

Candidates were asked to identify the name given to runaway slaves.

(b) Some slaves ran away from their masters.

(i) How were the runaway slaves known as?

..... [1]

Candidates performed well on this part question, with 71% of the cohort correctly identifying the term 'maroon slaves'.

4(b)(ii) - Identifying Le Morne Brabant

Candidates were expected to identify and name the mountain shown in **Picture 2**.

Picture 2

Most candidates correctly named the mountain as 'Le Morne Brabant'. The shortened name, 'Le Morne', was also accepted. However, since this mountain is a very important part of our history lessons, marks were not given for incorrect spelling. Candidates are expected to know how to spell this key historical site correctly.

4(b)(iii)- Punishment inflicted upon runaway slaves when they were caught.

This question asked students to name one way runaway slaves were punished after being caught.

(iii) Give **one** way how runaway slaves were punished when they were caught.

..... [1]

Many candidates answered this part question correctly. However, several answers did not fit the historical context. The examiners accepted correct facts even if they were not in the textbook, such as 'slaves being branded with hot metal rods'.

Accepted answers included:

- They were chained.
- They were beaten badly.
- They were whipped/ flogged/ hit.
- They were deprived of food.
- They were burnt with hot metal rods.
- Their ears/fingers were cut

Recommendation:

Candidates should be encouraged to read questions carefully and pay close attention to keywords. In this case, many candidates ignored the word "how" and gave answers that were too general, such as "they were severely punished." Because these answers did not describe a specific method of punishment, they were not accepted.

4(b)(iv) Why were farmers afraid of runaway slaves?

Candidates were expected to give one reason why farmers were afraid of runaway slaves.

(iv) Give **one** reason why farmers were afraid of runaway slaves.

..... [1]

Many candidates attempted this part of the question well, with about 60% of students answering correctly.

Accepted answers included:

- They attacked farmers to get food.
- They robbed farmers to get food.
- They set fire to farms/ houses.

QUESTION 5: Natural Hazards (Volcanoes) - (6 marks)

This question aimed to assess students' knowledge and understanding of Unit 3: Natural Hazards, with a specific focus on Volcanoes. It was structured into three parts.

Part question 5(a)

Candidates had to name two natural hazards other than volcanoes.

Volcanoes are natural hazards.

(a) Name **two** other natural hazards.

1.

2. [2]

This part was successfully attempted by most candidates, with 78% of the cohort scoring the marks.

Accepted answers included:

- Earthquakes
- Tropical cyclones/ Hurricanes/ Storms
- Torrential rains
- Flash floods/ floods
- Tsunamis
- Tornadoes

Part question 5(b)

Candidates were expected to give two reasons why volcanoes are considered natural hazards.

(b) Give two reasons why volcanoes are considered natural hazards. 1. 2. [2]
--

This part question proved challenging, with only 56% of candidates scoring full marks. A handful of candidates-around 9% managed to secure partial marks. Many candidates mistakenly tried to explain why volcanoes are "natural" rather than "man-made." As noted in previous reports, candidates do not need to make this distinction. Instead, they should focus on giving specific reasons why volcanoes are hazardous (dangerous) to people and the environment.

Some examples of answers that were not credited:

- It is an unexpected event
- It is caused naturally

Accepted answers included:

- They cause harm to the people.
- They cause harm to the environment.
- They destroy the agricultural fields/sugarcane. fields/ vegetable farms.
- They destroy houses/ buildings.
- People are injured/ lose their lives.

Part question 5(c)

This part of the question tested how well candidates could apply their knowledge and understanding to a real-life event. The question focused on the 2010 volcanic eruption in Iceland, which caused many airports to close.

(c) In 2010, a major volcanic eruption in Iceland caused the shutting down of many airports in Europe.

Explain why these airports were closed.

.....

..... [2]

Only about 40% of candidates managed to secure full marks. Many candidates concentrated on the airport being damaged or destroyed whereas the main idea to be explored was passenger safety.

Accepted answers included:

- Airplanes may suffer major engine problems and crash.
- To ensure the safety of passengers.
- Planes cannot take off and land due to black smoke/ dust.

Partial mark was awarded to limited answers. Few examples are :

- Poor / No visibility.
- It is risky/ dangerous.
- Planes get difficulties to fly

Recommendation:

To foster a deeper understanding of volcanic hazards, incorporating real-life news reports is an excellent pedagogical approach. Encouraging learners to research the implications of specific eruptions and present their findings allows them to move beyond textbook definitions toward critical thinking. Inquiry-based learning is a good teaching strategy to tackle such topics.

QUESTION 6: National Symbols (7 marks)

Question 6 aimed to assess candidates' knowledge and understanding of Unit 4: Celebrating Independence, with a primary focus on the Coats of Arms as National Symbols of Mauritius and Rodrigues.

Part question 6(a) was based on **Picture 3**-The Coat of Arms of Mauritius.

Part question 6(a)(i) - Identifying the four sections of the Coat of Arms

This part question required candidates to identify the name given to the four sections of the Coat of Arms.

- (i) The Coat of Arms is divided into four sections.
What are these sections called?

..... [1]

The correct answer was 'quarters'. Only about 28% of candidates answered correctly. It was observed that a large majority of candidates did not even attempt this part of the question, suggesting a widespread lack of familiarity with the specific terminology of the Coat of Arms.

Recommendation:

Candidates should be made aware of the national symbols and the meaning behind each component. Beyond simple rote memorisation, building a conceptual understanding of these symbols fosters a deeper sense of citizenry and a sense of belonging to the nation.

Question 6(a)(ii) – Identifying the symbol for European travelling to Mauritius

Candidates had to identify the symbol in the Coat of Arms that refers to Europeans travelling to Mauritius.

- (ii) Which symbol in the Coat of Arms refers to Europeans travelling to Mauritius?

..... [1]

The correct answer is the 'sailing ship'. Accepted answers included boat, sailing boat and ship. Almost 70% of candidates answered this part correctly.

Question 6(a)(iii) – Identifying other national symbols of Mauritius

In this part of the question, candidates were expected to name two national symbols other than the Coat of Arms.

(iii) The Coat of Arms is a national symbol.
Name **two** other national symbols of Mauritius.

1.

2.

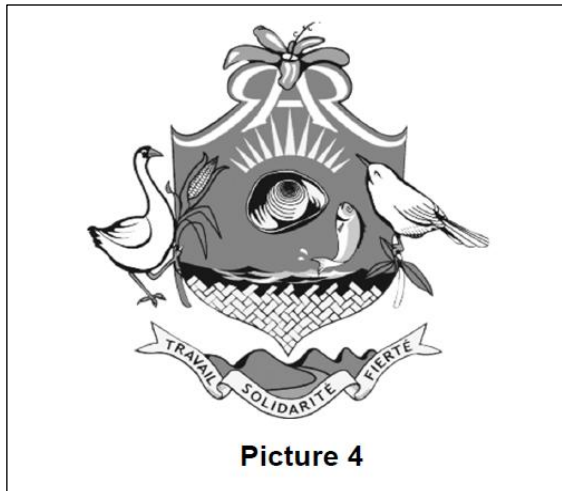

[2]

Almost half of the candidate population scored full marks, around 30% scored partial mark.

Accepted answers were:

- Dodo
- National flag
- National anthem
- National flower (OR trochetia where it was named)

Part question 6(b) was based on Picture 4-The Coat of Arms of Rodrigues.

Picture 4

Part question 6(b)(i) - Identifying a bird in the Coat of Arms

Candidates were required to name one bird shown on the Coat of Arms of Rodrigues.

(i) Name **one** bird shown in **Picture 4**.

..... [1]

This item was very well-answered, with more than 80% of candidates securing the mark.

Accepted answers were:

- Solitaire
- Fauvette
- Warbler

Part question 6(b)(ii) - Features representing the products of Rodrigues

Candidates were required to name two features in the Coat of Arms that represent the products of Rodrigues.

(ii) Name **two** features in the Coat of Arms that represent the products of Rodrigues.

1.

2. [2]

This part question was generally well-answered, with almost two-thirds of candidates securing full marks.

Accepted answers included:

- Maize
- Fish
- Basketry
- Crafts
- Hat

QUESTION 7: Farming (6 marks)

Question 7 aimed to assess candidates' knowledge and understanding of Unit 1, Topic 2: Agricultural Land Use. The scope of this question was broad, covering several key aspects of the agricultural sector in Mauritius and Rodrigues.

Question 7(a) – Identifying the Type of Farming

Candidates were required to identify the type of farming shown in the **Picture 5**.

(a) **Picture 5** shows one type of farming.

Picture 5

What type of farming is shown in **Picture 5**?

.....

[1]

This part question was well-handled, with almost two-thirds of candidates correctly identifying the farming type as "Pastoral farming".

Question 7(b)- Identifying human factor that affects farming

Candidates were expected to name one human factor that affects farming.

(b) Name one human factor that can affect farming. [1]

This part question was moderately well-handled, with almost half of the cohort providing a correct response.

Accepted answers included:

- Transport
- Location/site
- Labour

Question 7(c) – Identifying market gardening at Saint François

Question 7(c) required candidates to identify the specific type of farming practiced at Saint François in Rodrigues, where vegetables are grown on alluvial deposits primarily for sale.

(c) At Saint François in Rodrigues, people plant vegetables on the alluvial deposits of rivers for sale. What type of farming is this? [1]
--

This part question was successfully attempted by almost 60% of candidates. The accepted answer was "Market gardening".

Question 7(d) – Identifying Crops Grown on Terraces in Rodrigues

Candidates were required to name one crop grown on terraces in Rodrigues.

(d) Name **one** crop which is grown on terraces in Rodrigues.

..... [1]

Almost 60% of candidates secured the mark for this item.

Accepted answers included:

- Maize
- Manioc
- Sweet potatoes
- Lemons.

Question 7(e) – Government initiatives to boost agricultural productivity

This part question required candidates to identify two ways in which the government provides support to farmers to help increase their productivity.

(e) The government is helping farmers to increase the production of food crops. Give **two** ways in which the government provides help to the farmers.

1.

2.

[2]

This item proved to be a significant challenge for the cohort. Only 28% of candidates managed to secure full marks, while one-third secured at least one mark.

Accepted answers included:

- Duty free facilities on utility vehicles
- Land mechanisation facilities
- Training facilities by FAREI on hydroponics/ aquaponics, greenhouses
- Pest control facilities

- Schemes to promote bio-farming (organic farming)
- Regular fruit flies/ pest control facilities
- Irrigation facilities
- Grants/ loan facilities to set up greenhouses/ sheltered farming/ smart agriculture/ protective nets.

Recommendations:

Given the frequent public debates on food security, import dependency, and government agricultural initiatives in Mauritius and Rodrigues, learners should be encouraged to actively follow these discussions in the media.

Engaging with real-world issues—such as reports on radio, television, and in newspapers—will help candidates think critically and independently. This approach moves beyond rote memorisation, allowing them to connect classroom concepts to current national challenges and significantly deepening their understanding of the subject and broaden their knowledge base.
