

Shopping – Profit and Loss

Introduction of terms

- Cost Price (CP) = the price you paid
- Selling price (SP) = the price you sold it for
- Profit occurs if $SP > CP$
- Loss occurs if $CP > SP$
- Write formulas using visual aids: Profit = $SP - CP$
Loss = $CP - SP$

Activity 1: calculating profit

Calculate profit?

Profit = Selling price – Cost price

$$\text{Rs } 30 - \text{Rs } 20 = \text{Rs } 10$$

Activity 2:

“Bought pen for Rs 20 and sold it for Rs 8”.

Calculate loss?

$$\begin{aligned}\text{Loss} &= \text{Cost price} - \text{Selling price} \\ &= \text{Rs } 20 - \text{Rs } 8 = \text{Rs } 12\end{aligned}$$

Question 1:

Complete the table below:

	Selling price (SP)	Cost price (CP)	Profit/Loss
Example	Rs 64	Rs 54	$SP > CP \rightarrow \text{Profit}$ Profit = $\text{Rs } 64 - \text{Rs } 54$ = Rs 10
	Rs 73	Rs 41	
	Rs 104		Rs 12
		Rs 209.60	Rs 53.40
	Rs 47	Rs 36	Loss = $\text{Rs } 47 - \text{Rs } 36$ = Rs 11
	Rs 68.75	Rs 53.25	
	Rs 100		Rs 18
		Rs 204	Rs 22

Question 2:

A customer buys a pack of rice for Rs 50 and sells it for Rs 60.

Calculate the profit or loss the customer makes?

Question 3:

A fruit seller bought potatoes at Rs 30 per kg. Calculate his profit if he sold 145 kg of potatoes at Rs 38 per kg.

**Question 4:**

Tina buys a T-shirt at Rs 700 and sells it at Rs 500 to a friend. Calculate her loss.

**Question 5:**

Lea buys a pen for Rs 20 and sells it for Rs 8. Calculate her loss.
