

Activity 1: Review of prerequisites - Fraction and angles in a circle

Steps:

1. Look at the circle on the board and answer the following questions:

- If the circle represents a whole, what fraction is 1 part?
- If one turn = 360° , how many degrees is each part?

2. Calculate the corresponding angles for simple fractions e.g. $\frac{1}{2}$, $\frac{1}{3}$...etc.

Using the visual chart, discuss the following:

- If half (50%) of your class uses Instagram, how many degrees is that?
- If three quarters (75%) of your class uses TikTok, how many degrees is that?

Activity 2: Time spent on Social Media Daily

3. Example 1

Use the given data below to draw a pie chart using different colours for different segments. Label the different segments and choose an appropriate title.

Social Media Platform	Snapchat	TikTok	YouTube	Instagram
Time Spent (hours)	2	4	1	2

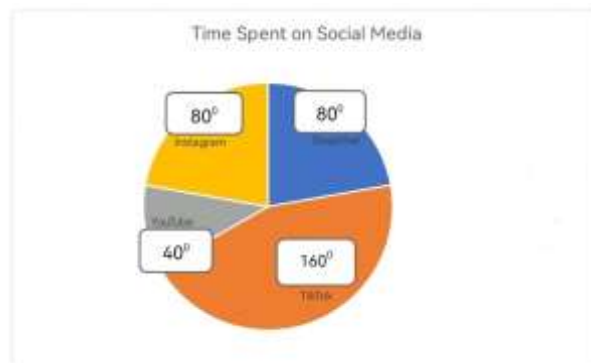

Calculate the total number of hours:

Total time = 9 hrs

Find the corresponding angles:

Social Media	Time Spent (hrs)	Fraction	Angle
Snapchat	2	$\frac{2}{9}$	$\frac{2}{9} \times 360 = 80^\circ$
TikTok	4	$\frac{4}{9}$	$\frac{4}{9} \times 360 = 160^\circ$
YouTube	1	$\frac{1}{9}$	$\frac{1}{9} \times 360 = 40^\circ$
Instagram	2	$\frac{2}{9}$	$\frac{2}{9} \times 360 = 80^\circ$

Draw the pie chart:

4. Discuss the following:

- Which platform has the largest segment? What does that mean?
- Which platform(s) has the smallest segment? What does that mean?

Activity 3: Favourite Social Media Platform

5. Work in pairs, use the data provided to draw a pie chart.

The table below shows the favourite social media applications among 36 students.

Social Media Platform	Instagram	TikTok	Facebook	WhatsApp
Number of students	13	11	5	7

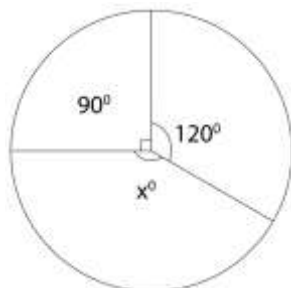

Use a pair of compasses and a protractor to draw a pie chart to represent the above information.

G. Assessment

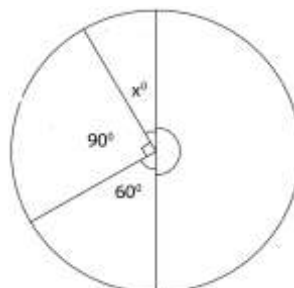

Question 1 – Finding angles in a Pie chart

Find angle x in the pie charts below.

(a)

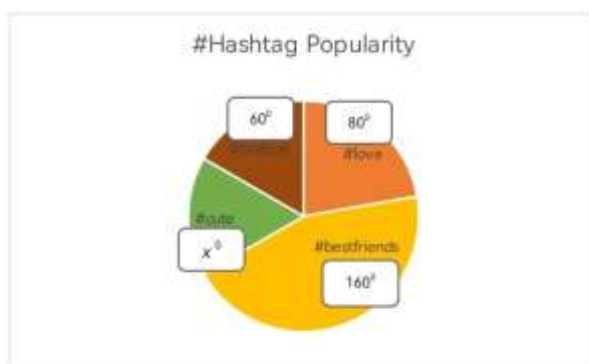

(b)

Question 2 - Interpreting Pie Chart

The pie chart below shows the #hashtag preferred by 90 social media users.

(a) Find the value of angle x .

(b) What #hashtag is **most** preferred by social media users?

(c) (i) Find the fraction of users who preferred #love.

(ii) Find the number of users who preferred #love.

Note: (c) may be used as an example

(d) (i) Find the fraction of users who preferred #fashion.

(ii) Find the number of users who preferred #fashion.

(e) How many users preferred #bestfriends?

Question 3 – Constructing a Pie Chart

The table below shows the number of likes, shares and comments for a post on Facebook.

Likes	Shares	Comments
120	80	40

Use a pair of compasses and a protractor to draw a pie chart to represent the above information.

H. Extension of activity
