

## Social Media (Bar Chart): Grade 9

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A. Title of card: Bar Charts illustrating time spent on different social media                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>B. Competency, Element and Performance Criteria:</p> <p>C 2.4: Represent and interpret data from charts/graphs in daily life</p> <p>Element 1: Read and interpret bar charts, line graphs and pie charts</p> <p>Performance Criteria: Bar charts - Level 1: Construct Bar charts &amp; Level 2: Read and interpret data represented in bar charts</p>                                                                                                                                                                                                                                                                                                 |
| <p>C. Purpose of activity:</p> <p>This activity will develop students' understanding of bar charts as well as to enable them represent and interpret data from these charts in daily life.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>D. Learning Outcomes:</p> <p>By the end of the lesson, students should be able to</p> <ul style="list-style-type: none"><li>• Identify the different components in a bar chart (e.g., title, axes, labels, bars)</li><li>• Construct a bar chart using a given set of data</li><li>• Read and interpret data represented in a bar chart</li></ul>                                                                                                                                                                                                                                                                                                     |
| <p>E. Resources and materials:</p> <ul style="list-style-type: none"><li>• Coloured whiteboard markers</li><li>• Graph paper</li><li>• Coloured pencils</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>F. Teaching trajectories/Implementation guidelines:</p> <p><b>Activity 1: How much time do you spend on social media?</b></p> <p>Steps:</p> <ol style="list-style-type: none"><li>1. Ask the students in your class to state the approximate number of hours they spend daily on social media. E.g., 0 - 1 hr; 1 - 2 hrs; 2 - 3 hrs; 3 - 4 hrs; 4+ (more than 4) hrs.</li><li>2. Record their responses on the board in tabular form.</li><li>3. Demonstration - Use the data collected to draw a simple bar chart on the board using different colours for the different bars. Show how to label the axes and choose an appropriate scale.</li></ol> |

4. Highlight the key points:

- **What is a bar chart?**

A visual representation of data using rectangular bars.

- **Parts of a bar chart:**

Title: e.g. Time Spent on Social Media by Grade 9 Students

x- axis: Time/number of hours spent

y-axis: Number of students

Labels and scale

### Activity 2 – Favourite Social Media Platforms

5. A survey is carried out with the students to collect data on their ‘Most Used/Favourite Social Media Platform’.

6. In pairs, students construct a bar chart using graph paper or digital/online tools (if available). The teacher assists struggling students.

7. Students are asked about the use of bar charts in real-life social media analytics. E.g., Influencers tracking the number of followers.

### G. Assessment

#### Question 1. Interpreting Bar Chart

Study the bar chart below which illustrates the ‘Weekly Time spent (in hours) on different Social Media Applications (Apps)’ and answer the following questions:

- (a) Which 'app' is used the most during the week?
- (b) Which 'app' is used the least during the week?
- (c) What is the difference in the number of hours spent between the most and the least used apps during the week?

Note: The above questions may be assessed orally.

## Question 2. Constructing a Bar Chart

The table below shows the favourite social media applications among 36 students.

| Social Media Platform | Instagram | TikTok | Facebook | WhatsApp |
|-----------------------|-----------|--------|----------|----------|
| Number of students    | 13        | 11     | 5        | 7        |

- (a) Use the information given and construct a bar chart on graph paper.  
*Remember:* Include a title and label the axes of the bar chart.

Questions for discussion.

(b) What does the height of each bar represent?

(c) Why is labelling important in a bar chart?

**Question 3.** Collecting data and Constructing a Bar Chart

Ask your students to identify 4 influencers/popular figures.

(a) Draw a table to show the number of followers for each one identified, on a specific social media platform e.g. TikTok or Instagram.

(b) From the data obtained, construct a bar chart on graph paper.

(c) Interpret the different components of the bar chart. Ask questions such as: Which influencer is most/least followed? What is the difference between the most and the least number of followers?

**H. Extension of activity**

Represent the data in Question 2 using a *pie chart*.

Discuss the construction, representation and interpretation of data using a pie chart in other practical situations.
